

CLAIMS

1. In a heat insulation panel serving also as a placing mold form for a concrete wall body, a heat insulation panel serving also as a mold form, characterized in that a plastic reinforcing panel having a number of groove- or hole-like air passage sections permitting communication in an in-plane direction is integrated with at least one surface of a heat insulation material molded in the form of a panel.
5
2. The heat insulation panel serving also as the mold form according to claim 1, wherein said heat insulation material is in the form of a flame-resistant or incombustible panel made of resin foam.
10
3. The heat insulation panel serving also as the mold form according to claim 2, wherein said resin foam includes a phenol resin foam material.
15
4. The heat insulation panel serving also as the mold form according to claim 1, wherein said heat insulation material includes an inorganic material.
20
5. An outer heat insulation wall structure characterized in that a heat insulation panel serving also as a mold form provided by integrating a plastic reinforcing panel having a number of groove- or hole-like air passage sections with at least one surface of a heat insulation material molded in the form of a panel is disposed on the outside of a concrete wall body, before external finish is given to an outer surface of said heat insulation panel.
